

Wind Rated Sectional Doors

If you're ready to draw the line at average and reach for better call us today.

To locate Steel-Line branches across Australia call: **1300 427 243** or visit steel-line.com.au

Superior strength and rigidity are qualities of the unique design of the Steel-Line wind rated sectional door, suitable for high wind or cyclonic locations.

Stringently tested to meet wind load requirements

Steel-Line wind rated garage doors have been engineered to the highest standard and tested at the James Cook University Cyclone Testing Station against the wind loading requirements of AS/NZS 4505-2012.

Designed for strength and safety

Our Strut-Lock™ Post Free wind rated sectional doors incorporate the use of heavy duty struts, commercial style side hinges, top brackets in combination with a unique stile reinforcement that provides maximum resistance to forces exerted by cyclonic and high winds.

The Wind Brace design featured with removable steel wind brace post(s) that is installed to the garage door once a cyclone warning is received. It takes about 2-5 minutes to install, and no tools are required. This feature can significantly enhance wind resistance up to C4 wind rating while still ensuring a smooth door operation.

3 easy steps to create your sectional garage door

1 Door Profiles and Finishes

Ranch (textured finish)

Heritage (textured finish)

Flatline (smooth or textured finish)

Slimline (smooth or textured finish)

Glacier (smooth or textured finish)

NOTE:

- Smooth finish Slimline and Glacier are only available in the Savannah range at premium pricing.
- For “smooth finish” garage doors, shadowing in the panel surface will be more evident. Shadowing is the rippling that occurs as a result of roll forming / pressing flat sheet steel.

Textured Finish | Slimline

Smooth Finish | Glacier

DECO
WOOD

Architectural

UniCote
LUX

Timbers of the World

Dulux

More than 70 Dulux colours also available for sectional doors only. Please inquire about availability.

Colorbond
ClassicMatt
Range

NOTE:

- All colours shown on this chart are a guide only. The limitations of printing processes make extremely accurate matches impossible. We strongly recommend comparing your choice with actual samples. Additionally, Steel-Line reserves the right to vary or remove colours without notice.
- Colorbond Metallic range is only available in smooth finish and in the Slimline and Glacier sectional door profiles.
- Premium colours are not available in smooth finish.
- UniCote range is only available in the Flatline, Slimline and Glacier sectional door profiles.

Fit your wind rated sectional door with a specially designed automatic opener for safe and hassle free entry and exit from your garage or shed.

All of our openers are engineered to the highest standards ensuring easy operation, optimum performance, long life and peace of mind.

- Soft start / stop function to ensure smooth and quiet door operation
- Courtesy lighting illuminates your garage when the opener is activated.
- Manual Release: in case of power failure you can simply activate the manual release to open your garage door.
- Safety Auto Reverse System: door immediately stops and reverses when it comes into contact with an object.
- Remote handsets and wireless wall button
- 5 year motor warranty / 2 year electronics warranty

Powerhead

2 x Three Channel Key Ring Transmitters

Optional Wireless Keypad

can be programmed with up to twelve user codes, so you can leave your keys at home with the peace of mind.

Optional Battery Backup

provides an energy supply in the event of a power cut.

Optional Automatic Garage Door Deadbolt SD

Quality Features

Strong Hinges

Steel-Line uses hinges made of robust plastic for superior strength, quieter and trouble free operation.

Finger Proof Safety

Our sectional doors feature a curved finger proof joint for added safety.

Heavy Duty Bottom Rail

To increase strength in the lower part of the garage door and add extra protection.

Optional 'Photo Eye'

Allows the garage door to automatically reverse when its sensory light beam is broken by an obstruction.

Heavy duty and reinforced hardware throughout product

Is your garage door prepared for a cyclone?

As the homeowner, it is important to check with your local council for your home’s specific wind load requirements and appropriate design pressure.

Australia is a great place to live. However, every year from November to April, cyclones can affect the eastern, northern and western coastlines, so whether you live in the city or the rural area, learning to protect yourself, your family and your property from cyclones is very important.

As the largest point of entry, your garage door offers the greatest threat for high-pressure destruction. A number of studies have discovered one of the common failures during cyclone event was garage doors being blown in or out. This allowed wind and water to enter the house, which caused the roof and walls to fail. On some buildings, the change in internal pressure caused other damage to the structure.

If you live in high wind and cyclonic areas, it’s necessary to engineer your garage door a little differently to ensure it withstands the particular stresses it may be subject to and minimise the potential damage to your home.

New homes in cyclone-prone areas of northern Australia are now required to use wind-resistant garage doors, installed professionally to meet the current National Construction Code.

Various design options to meet size and wind load requirements

GARAGE DOOR	WIND CLASSIFICATION	WIND SPEED (KM/HR)	MAX DOOR HEIGHT (MM)	MAX DOOR WIDTH (MM)
Post Free Sectional Door	C2	220	2580	5500
Wind Brace Sectional Door	C2	220	3405	to 6000
	C3	266	2850	
	C4	310		

Wind Classification

AS4055-2012 is based on a ten-band wind classification system: N1 to N6 for non-cyclonic Region A & Region B; and C1 to C4 for cyclonic Region C & Region D. A higher classification number means the wind speed is higher.

Location Classification

Cyclonic Classification:

- Region C
- Region D

Non-cyclonic Classification:

- Region A
- Region B

Refer to the AS4055-2012, FIGURE 2.1 BOUNDARIES OF REGIONS A, B, C AND D for more information.
