Phoenix Industrial Sliding & Folding Doors

Heavy-Duty Sliding & Folding Solutions for Wide-Span Access

The Phoenix range of industrial sliding and folding doors provides robust, space-efficient access solutions for large industrial, commercial and infrastructure projects.

Designed for durability, security and ease of operation, Phoenix doors are available in a range of sliding and folding configurations to suit wide and tall openings. With flexible cladding and glazing options, the range can be customised to meet specific project, operational and architectural requirements.

Features

- Single, bi-parting and multi-leaf sliding configurations
- Folding door options for large openings
- Large-span capability
- High-security construction
- Secure locking systems
- Precision track and roller design
- Wind-load compliant engineering
- Flexible cladding and glazing options
- Manual, motorised or automated operation
- Low-maintenance construction
- Designed for long service life

Designed for Wide Span Access

Phoenix doors are engineered for large openings where reliable, secure access is critical.

A range of configurations allows the system to be matched to the available opening, operational requirements and site conditions, including applications requiring particularly wide or tall access points.

Door Configurations

Swift Bi-Fold Door (Side-Hung Bi-Folding)

Available with manual or electric operation, the Swift Bi-Fold Door provides a compact folding configuration for openings up to approximately 24m².

Swift-SEW Bi-Fold Door (Extended Height Bi-Folding)

Designed for larger and taller openings where additional height capability is required.

Osprey Sliding Folding Door (Top-Hung Multi-Leaf Sliding/Folding)

A multi-leaf configuration designed for wide-span openings, combining sliding and folding movement for flexible access.

Kingfisher Straight Sliding Door (Top-Hung or Bottom-Rolling)

A straight sliding configuration designed for very large openings, with effectively unlimited width and heights of up to approximately 7 metres.

Security & Access Control

Phoenix doors are designed with strong panels and secure locking systems to provide reliable protection for specialist and industrial facilities.

Optional safety sensors, automation and access control can also be incorporated to support the wider security and operational requirements of the facility.

Operation

Phoenix doors are available with:

Manual operation

A practical solution for applications where controlled manual access is suitable.

Motorised operation

Powered operation for larger or more frequently used openings.

Automated operation

For projects requiring integration with facility access and control systems.

The door operation can be selected according to the size, application and operational requirements of the project.

Cladding & Glazing

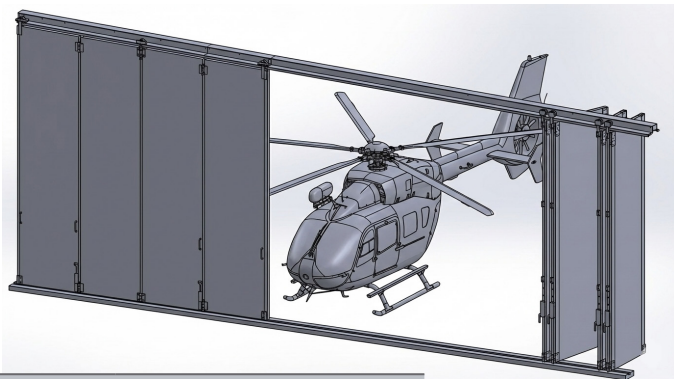

A range of cladding and glazing options is available, providing flexibility to achieve the required combination of appearance, performance and functionality.

Doors can be customised according to project requirements, making them suitable for both industrial environments and specialist infrastructure where architectural integration is important.

Wind & Environmental Performance

Phoenix doors can be engineered to handle project-specific wind loads, impact resistance and environmental conditions.

Their heavy-duty steel and aluminium construction is designed for high-performance operation, with weather and corrosion resistance suitable for demanding industrial environments.

Product Variant	Type / Configuration	Max Opening (approx.)
Swift Bi-Fold Door	Side-hung bi-folding, manual/electric	Up to 24 m²
Swift-SEW Bi-Fold Door	Extended height bi-folding	Larger/taller openings
Osprey Sliding Folding Door	Top-hung multi-leaf sliding/folding	Wide span openings
Kingfisher Straight Sliding	Straight sliding (top-hung or bottom-rolling)	Essentially unlimited width, up to ~7 m height
